**Southwest Energy, L.P.**  
Houston, TX

Southwest Energy has selected GasPro, Data Management Solutions' gas management software, to use in managing their gas transactions and will have Petris host the system over the Internet via PetrisWINDS Now!.

Southwest Energy is in the business of acquiring, gathering, transporting and reselling producer owned gas. This business model has been very successful and as a result Southwest Energy now faces the challenge of growing its business without adding major infrastructure. To address this business challenge, Southwest Energy decided it needed a sophisticated gas management system to not only handle its produced volumes, but one that allowed it to manage sales, transportation, credit limits, accounting functions, imbalance trading and reconciliation, hedging, etc. To accommodate the need to travel and still have access to available inventory, current market conditions and to be able to enter real-time deal information, Southwest Energy chose the GasPro system delivered over the Internet.

To learn more about Southwest Energy, visit their web site at [www.southwest-energy.com](http://www.southwest-energy.com)

"GasPro is a state-of-the-art gas management software package" says Frank Pena, DMS President "that will provide Southwest Energy with the tools necessary to maintain and grow their business."

Petris is an expert in Web-services and has a one-of-a-kind vendor neutral application. For more information about Petris visit [www.petris.com](http://www.petris.com)
