Clearwater Enterprises, LLC
Oklahoma City, OK

Clearwater Enterprises out of Oklahoma City, OK, has announced it will implement the GasPro 3 system to manage wellhead balancing and end-user sales customers in the Oklahoma area.

CWE is currently developing an extensive services operation where it manages wellhead nominations, balancing and payments for small operators in Oklahoma and surrounding areas.

CWE is also expanding into end-user services as OG&E begins to open its market.

CWE has determined that GasPro is the best solution for its current business, and has the capability and flexibility to handle any future business.

The system was installed and placed into production April 11th. The system administrator says users are currently setting up source information and they expect to be fully live in time to send out April's invoices and May's nominations.
