

GasPro - Functionality Overview

Source Information

DMS' GoLive implementation process is designed for the client, to provide a path and a process for gathering information on Legal Entities, Point of Location, Contracts, Categories and User Defined Transaction Tracking, Chart of Accounts, Account Links, and data that is needed to successfully manage transactions within GasPro.

Trading

GasPro provides several easy-to-use physical and financial trading tools, from screens that track daily deals, allow multiple simultaneous updates, and help manage your available swing volumes, to an easy to use hedge function. The Trading section has all the tools your traders will need including Confirmations and Position Management.

Scheduling / Balances

GasPro provides an array of scheduling tools, including screens that track transactions from pipeline and/or point level views. Schedulers have all the information they need to make quick and timely scheduling decisions, including real-time volumetric MDQ, imbalance, and storage positions. With our EDI nominations process transmitting the scheduling information is just a click away.

Actuals

GasPro provides powerful, yet easy to use tools for actualizing and re-allocating your volumes. From screens that allow you to setup pre-determined allocations, to daily and/or monthly allocations, GasPro has all the tools to make the actualization process simple.

Compliance

The GasPro system is designed to accommodate controls and reporting changes brought about by new clients, industry changes, and regulatory requirements. With over 16 years of providing its clients with the audit information required to comply with their individual, and at times unique audit requirements, DMS has proven its ability to meet the FERC, FAS, and SOX controls and reporting mandates.

Accounting

The GasPro accounting process is fully automatic. Every transaction entered by the Front Office is captured and seamlessly recorded in the gas accounting system within GasPro. The process can be extended to flow the information to a corporate financial system. GasPro provides advanced functionality to record, control, and analyze every accounting transaction.

Reporting

GasPro provides the most powerful user defined ad hoc query and reporting tools in the industry, as well as over 150 industry standard reports.
