

Local Distribution

GasPro has been successfully serving all business segments in the Gas industry since the early 90's by providing a truly seamless, user friendly solution from deal capture through financial statements. GasPro also provides the unique functionality required to succeed in the Local Distribution Market.

Jurisdictional Cost Accounting

GasPro has the ability to accurately capture and automatically allocate gas costs across multiple jurisdictions based on percentage, physical flow, and/or predefined parameters. This feature eliminates the tremendous burden of manually allocating the supply cost to the point of receipt.

Asset Optimization

As utility companies leverage under-utilized assets (transport & storage capacities) through asset optimization efforts, the GasPro system is equipped to support asset optimization through tracking, accounting, and reporting on all transactions. Once the profits have been automatically calculated they are ready to be distributed to the participating profit centers.

Compliance

GasPro is a comprehensive software product that provides the best seamless transaction capture, process controls, and reporting of results throughout the gas management process. The system has been structured and designed to capture all processes and data required to accommodate the most stringent compliance and reporting requirements.

Derivatives

The system provides the functionality required to capture physical forwards and financial deals (futures, options, and swaps, etc.). The system also provides a rich suite of reporting tools that facilitate the real-time tracking of MtM Positions and their related unrealized gains or losses on a full or discounted basis.

Risk Management

GasPro automatically captures all exposure transactions throughout the system and consolidates them into one powerful risk analysis query / ad hoc that presents real-time exposure and liquidity positions. This very important tool provides the user with the needed information to ensure that the company's risk tolerance policy is enforced.
