DATA MANAGEMENT SOLUTIONS (DMS) SIGNS CONTRACT WITH TEXAS General Land Office (GLO)

Texas General Land Office selects GasPro5 to manage their Take In-Kind Program

The oldest state agency in Texas, the Texas General Land Office, has chosen to use software solution provider Data Management Solutions to help track its oil and gas activities. The Texas General Land Office (TGLO) selected Data Management Solutions' gas management software, GasPro5, to use in managing the state's Take-In-Kind (TIK) program. Petris will host the system over the Internet via PetrisWINDS Now!.

The Texas General Land Office manages the mineral resource underlying State of Texas owned land. Natural gas produced from many of those lands is taken in-kind and marketed directly to state agencies and independent school districts for their energy generation needs. Revenue generated from the natural gas in-kind sales goes into the Permanent School Fund. To learn more about the Texas General Land Office visit their web site at www.glo.state.tx.us.

"DMS made the decision to partner with Petris as a way to reach both state agencies and independents," says Frank Pena, DMS President. "GasPro5 is state-of-the-art gas management software that is now affordable to smaller companies, as well as governmental agencies such as Texas General Land Office, thanks to Petris' ASP model.

If you would like more information on this topic, or would like to **schedule a demonstration of the GasPro software**, please contact **DMS** at gasproinfo@dms-houston.com.
